

Element Project- Webpage (Wiki) Name: _____

Element: _____

There are 117 elements. The one above has been assigned to you for this project. Try to learn as much as you can about this element, as you will be teaching others about it.

For this assignment you will be creating a webpage to help explain the basic information about an element from the periodic table.

THE ASSIGNMENT:

Build a wikipage that provides basic information about your element. At a minimum you must include the following key points.

1. element name
2. element symbol
3. atomic number
4. atomic mass
5. density
6. 2 chemical properties
7. 2 physical properties
8. 2 uses
9. at least one source of the element
10. state of the element at room temperature
11. charge on ion form
12. video on your element
